

Character

CharAssembler.cs

Uses CharAssembleInfo object to load character's information onto the character, giving them the correct stats and abilities.

CharCore.cs

Functions as the core of the character information and handles character interactions for combat.

DealDamage

Deals damage to the character. The character dealing damage is required for this field in order to invoke events based on dealing damage in addition to taking damage. If the character reaches 0 health or below because of this damage, the character dies

Input: int damage, CharCore damageDealer

Result: player loses hp, invoke playerTakeDamageEvent

HealHealth

Heals the character. The character healing is required for this field in order to invoke events based on healing a player

Input: int healing, CharCore healer

Result: player loses hp, invoke playerHealHealthEvent

Spawn

Respawns the player if the player has died, at a location.

Input: Vector3 spawnLocation

Result: player loses hp, invoke playerHealHealthEvent

CharStats and CharAssembleInfo

Object used to contain information of the character. CharStats contains information that goes into Char core. CharAssembleInfo contains ability list of the character as well as the CharStats.

To use, Create CharStats and CharAssembleInfo objects, put CharStats and abilities in CharAssembleInfo, then put CharAssembleInfo into CharAssembler
