

Match Systems

GameManager

GameManager is a core of the match system, keeping a list of teams and associated players and progressing the game state.

ObjectiveSystem

Parent class for an object associated with the objective of the game. It is able to give a score to a team using the GiveScoreToTeam method.

The score condition of the objective is expected to be programmed by the developer. Check the demo for example.

TeamManager

Script representing a team. It holds list of players, controls player's respawn, the layer a character uses as its ally and enemy, and keeps track of the amount of points gained by a team.

Set the team members in the TeamMembers list

Set the spawn positions in the SpawnPositions list

Set the team layer on the TeamLayer variable

Set the enemy layer on the EnemyLayer variable
