

Status Effect

StatusEffect.cs

Abstract class for status effect. Contains variables and methods for controlling the status effect duration and stats.

ApplyEffect - abstract method to be overridden with implementation of beginning of the status effect.

RemoveEffect - abstract method to be overridden with implementation of end of status effect, usually the inverse logic in ApplyEffect.

SpendDuration()

Decrease duration remaining. Removes status effect when remaining duration is depleted to 0.

Input: time elapsed

Result: decrease remaining duration based on time elapsed.

CurrentlyActive()

Returns true if status effect is active. Ability manager deletes the status effect if it is inactive

SetAffectedPlayer()

sets the player that is affected by this status effect.

StatusEffectManager.cs

Manages player's status effect, causing time to pass for the status effect (for duration) and controlling presence of status effect.

AddNewEffect()

Adds input status effect

Input: status effect (game object)

Result: adds status effect to player and calls its ApplyEffect method.
